

SAN-AIR™ kills microorganisms that escape filtration

HEPA filters block 75-85 per cent of contaminants measuring 3-10 microns; Many pathogens, including viruses, bacteria and mould, measure less than 1 micron and will escape the HEPA filter and get released back into the indoor air environment

SAN-AIR™ gels and liquids have been independently tested and validated to work against pathogens

24/7 air purification with no toxic chemicals

Strategic Partner HYGIENIQUE Services Sdn. Bhd A member of the AntiPest Management Group of companies
